

FUQUAY DRY EYE CENTER

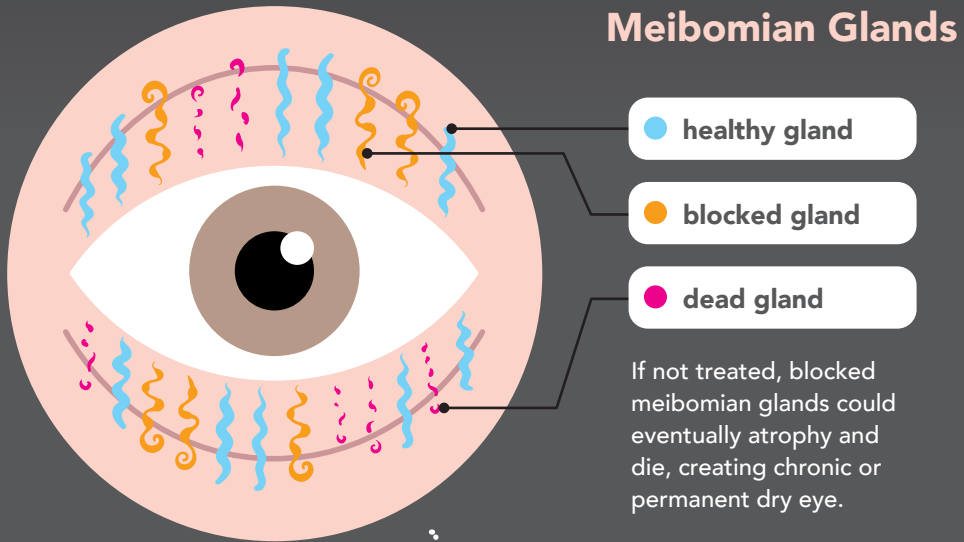

No more dry eyes!

With FDEC's dry eye treatment program

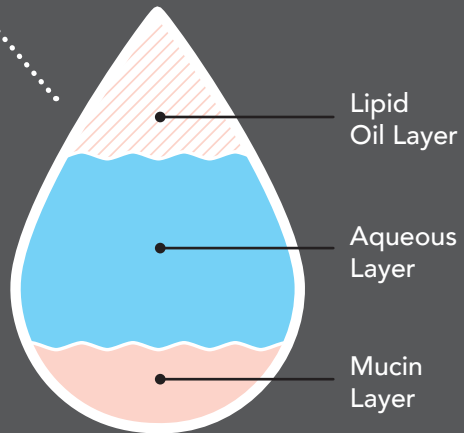

What Causes Dry Eye

Dry eye is caused by a lack of proper lubrication on the eye's surface, leading to irritation. Your eyelids contain meibomian glands, which produce oils that slow tear evaporation. When these glands become blocked, your eyes lose moisture faster, resulting in dry eye symptoms.

Your Tears

Your tears are made up of several layers that work together to keep your eyes properly lubricated. The oils that are produced in the meibomian glands provide the outer layer which protects the inner layers from evaporating too fast. When this outer layer is too thin, your tears evaporate quickly, creating dry eyes.

How Treatment Works

Dry eye treatment (Triphasic Restoration System) involves three individual steps within each of four separate office visits.

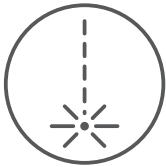

3

Steps

4

Visits

STEP 1 **Zap**

Intense light pulses are applied to the eyelids to eliminate inflammatory blood vessels. You will experience some discomfort during the short period of light pulses.

Duration: Approx 20 minutes

STEP 2 **Flush**

Heat is applied to the eyelids to soften the buildup within the meibomian glands. The liquefied solids are flushed away. You will experience a warm soothing feeling.

Duration: Approx 20 minutes

STEP 3 **Rejuvenate**

A soothing red light is applied to the treated area, encouraging cell renewal. This helps glands to produce nourishing oils that provide lasting relief and hydration.

Duration: Approx 20 minutes

Treatment FAQ

Q. Why do I have to go four times? Can one treatment take care of the issue?

A. In order to have a successful outcome, four sessions need to be performed.

Q. Can dead meibomian glands be restored with this procedure?

A. No, once a meibomian gland has died, it cannot be restored. This is why early treatment is so important. Damaged glands can be repaired, dead glands cannot.

Q. What is the recovery process like?

A. There is no recovery process, you can go about your business right away as normal.

Q. Can I wear makeup?

A. We advise that you arrive to your appointment with a clean face, free from any skincare or cosmetic products. Normal skincare/ cosmetic routine can resume the same day following each treatment session.

Q. Are there any side effects?

A. The only potential side effect is photosensitivity of the treated area. We recommend sun protection for the duration of treatment, especially during extended periods of sun exposure.
